Report of the Emergency Manager

For those from facilities in the County, do you have your SDS's and chemical sheets readily available, in writing, for first responders in the event of an emergency? What about a current floor plan?

First responders ran into an issue in a facility recently, where they went in, were told there were no chemicals in the building, when in fact there was a 55-gallon drum filled with really bad stuff, that would have leveled the building had it caught on fire. People on site said there was no basement in the facility...there was indeed a large open basement in the facility.

You have the information, but do you have it readily available for when the first responders get there? Laminated pages in a binder works wonders.

Our Hazmat Team was out at Royalton Ravine with all the kids from RoyHart, Jim Volkosh, our team captain, showed them pH testing with apple cider vinegar and the kids got to try on a Level A suit.

Our CIST, has been unbelievably busy, since the first of this year we're already over 20 individual peer to peer support meetings.
